

2026 MBRC Spruce Budworm Planned EIS Treatment

Areas with **shaded hexagons** show the relative density of the approximately 2,600 acres of total treatment on small landowner holdings. They are generalized to protect small landowner privacy and only a small fraction of each hexagon will be treated. Each hexagon represents an area of about 5,000 acres, and the darkest hexagon with the most acreage of proposed treatment, B-4, has about 650 acres identified.

Legend

- Mimic 2LV Treatment on MBRC Large Landowners
- Foray 76b Treatment on MBRC Large Landowners
- Small Landowner Impact Area**
(area not entirely treated, only select areas within)
- Least Treated Small Landowner Area
- Most Treated Small Landowner Area
